

Liz — Athlete Profile

Last updated: April 20, 2026

IDENTITY & BACKGROUND

Field	Value
Name	Liz
Occupation	Designer — UI/UX and motion design
Life stage	9 months postpartum, actively breastfeeding (plans to continue long-term)

PHYSICAL STATS

Metric	Value
Current weight	150 lbs / 68 kg
Pre-pregnancy weight	145 lbs
Pregnancy peak weight	210 lbs
Weight lost postpartum	60 lbs in 9 months
Body composition goal	Lean + muscular — not just light

GOALS (PRIORITY ORDER)

Priority	Goal
1	Body recomposition — build visible muscle, reduce body fat, look and feel strong
2	Trail race performance — summer series + two Cirque A-races
3	Maintain breast milk supply — non-negotiable constraint on all decisions
4	Feel good — energy, mood, recovery, confidence

TRAINING HISTORY

- Many years of weightlifting including serious Olympic lifting (clean & jerk, snatch)
- Strong neuromotor base and excellent movement literacy
- Rebuilding running volume postpartum — base solid, progressing conservatively
- Runs in the afternoon — morning window is lifting only
- Home gym: full barbell setup, squat rack, bench, DBs, KBs, GHD, rowing machine, bike
- No cable machine, no landmine, no pull-ups

WEEKLY TRAINING SCHEDULE

Day	Session	Rationale
Monday	Lower A	Fresh legs — two days before Wednesday race
Tuesday	Upper A	Upper only — legs stay fresh for Wednesday race

Wednesday	Race / Run	Weekly trail series all summer
Thursday	Rest	Full recovery day
Friday	Upper B	Upper only — no lower body fatigue before Saturday trail
Saturday	Trail Run	Aerobic base + race-specific fitness
Sunday	Rest	Full rest — recovery before new week

Morning lift window: 5:00–6:00 AM (60 min hard stop)

Run/race window: Afternoon (Wednesday races, Saturday trail)

Tuesday is always easy — no lower body the day before a Wednesday race

Only ONE lower body lifting day per week — racing and trail running provide additional leg stimulus

EXERCISE PREFERENCES

Loves:

- Push press
- DB shoulder press
- Cleans, jerks, clean pulls
- Barbell bench press
- Barbell back squat
- Romanian deadlift (RDL)
- Hip thrusts
- Bicep curls
- Front squat

No cable machine — substitutions:

- Lat pulldown → DB Pullover (lying, bringing DB up and back to target lats)
- Cable face pull → DB rear delt fly
- Pallof press → Dead bug
- Med ball slams → KB swings

Dislikes: Pull-ups, landmine setups, cable machines

DAILY MACRO TARGETS

Macro	Daily Target	Notes
Protein	150g	Non-negotiable. Priority 1.
Carbohydrates	175g	Anchored around workouts
Fat	80g	Omega-3 priority for hormones + milk
Calories	2,100–2,300 kcal	Never below 2,000. Breastfeeding requires fuel.

Red lines: never below 2,000 kcal/day | never below 150g protein | never below 100g carbs

If milk supply drops — eat more before investigating anything else

DAILY NUTRITION STRUCTURE

Time	What	Approx Macros
5 AM — Pre-workout	1 scoop whey + 1/2 banana	25g P 15g C 2g F
6:15 AM — Post-workout	1 scoop whey + 1 banana	25g P 27g C 1g F
7:30 AM — Breakfast	3 eggs + butter + toast + fruit + collagen	22g P 35g C 18g F
Pre-run (60-90 min before)	Greek yogurt + fruit OR whey + banana	20g P 30g C
Post-run (within 30 min)	Protein shake + banana OR eggs + toast	25g P 30g C
Dinner	35-40g protein + veg + moderate carbs	35-40g P
Late snack (if needed)	Protein bar or Greek yogurt	10-15g P

Note: Collagen does NOT count toward protein target — missing tryptophan, will not drive MPS

SUPPLEMENT STACK

Supplement	Dose	Timing	Purpose
Creatine	10g (2x5g)	Split pre/post + anytime	Muscle performance + cognitive function
Collagen	2 scoops	Post-workout or breakfast	Joint/tendon health — NOT complete protein
Vitamin D3	Per label	With fat-containing meal	Bone density, immune, mood
Omega-3	Per label	With food	DHA/EPA — breast milk, inflammation, recovery
Magnesium Glycinate	Per label	30-60 min before bed	Sleep, recovery, cortisol regulation
L-Theanine	Per label	With pre-workout	Smooths caffeine without blunting focus
Rhodiola	Per label	Morning, away from food	Cortisol regulation, fatigue resistance
Postnatal Vitamin	Per label	With food	Micronutrient insurance while breastfeeding
Pre-workout	Per label	~20 min before training	Under 200mg caffeine/day while breastfeeding

RACE CALENDAR

Date	Race	Week	Notes
Apr 22	Eagle Mountain	Wk 1	Run by effort
Apr 29	Dimple Dell	Wk 2	Run by effort
May 13	Soldier Hollow	Wk 4	Deload week — easy effort
May 20	Heber	Wk 5	Start pushing

Jun 3	Dimple Dell	Wk 7	Push it
Jun 10	Deer Valley	Wk 8	Fitness test
Jun 24	Solitude	Wk 10	Full race effort — peak week
Jul 8	Alta Series	Wk 12	Shakeout only — Cirque Alta Jul 11
Jul 11	CIRQUE ALTA	Wk 12	~8 mi, ~3,000 ft, Technical — A-RACE
Jul 15	Snowbird Series	Wk 13	Easy — post Cirque recovery
Jul 29	Brighton	Wk 15	Push it — rebuilding
Aug 5	Alta Series	Wk 16	Full race effort — peak week
Aug 12	Snowbird Series	Wk 17	Shakeout only — Cirque Snowbird Aug 15
Aug 15	CIRQUE SNOWBIRD	Wk 17	~8 mi, ~3,000 ft, Technical — A-RACE

POSTPARTUM & BREASTFEEDING NOTES

- 10 months postpartum at program start — still breastfeeding, plans to continue
- Prolactin elevated → estrogen suppressed → affects recovery, bone density, joint laxity
- Relaxin may still be present — monitor joint stability under heavy loads
- Cycle status: period returned April 2026 (Day 1 logged week of Apr 14)
- Currently in follicular phase as of Apr 20 (~Day 7)
- Fasted morning training spikes cortisol more in women — pre-workout fuel is mandatory
- Milk supply is a leading indicator of underfueling — monitor weekly
- Never below 2,000 kcal/day. Supply drops — eat more before investigating anything else

COACHING NOTES

- Strong training background — does not need basics explained
- Responds well to direct, science-backed reasoning with the 'why'
- Olympic lifting background — power movements are accessible and motivating
- Tracks macros daily with coach — log every meal, coach maintains running totals
- Weekly weigh-in: Monday morning, same conditions, before eating, after bathroom
- Frame everything around performance and function — aesthetic follows
- Data save workflow: Export JSON after each session, paste here for storage, Import to restore

CHECK-IN LOG

Week	Date	Weight	Cycle Day	Notes
Start	Apr 15, 2026	150 lbs	Day 2	Program begins. Period returned.
1	Apr 20		~Day 7	Follicular phase. First real week.
